

Product Requirements Document (PRD)

Product Name: GrowthHub

Vision: Personal Productivity & Competitive Growth Tracker for College Students

1. Problem Statement

College students preparing for placements lack a unified platform to track daily productivity, coding progress, and long-term consistency. Existing tools are fragmented and do not provide holistic growth insights.

2. Target Users

Primary users are college students preparing for placements, starting with students from a single college for initial adoption.

3. Authentication

Google OAuth and GitHub OAuth will be used for secure and simple sign-in.

4. Core Features

- Unified dashboard showing Striver A2Z progress (numerical only), LeetCode stats, and GitHub activity.
- Daily efficiency tracker with realistic goal planning and completion-based scoring.
- Optional competitive leaderboards (opt-in).

5. Striver Progress Tracking

Only total progress numbers (e.g., 255/456) will be tracked and visualized. No questions or sheet content will be displayed or scraped.

6. Leaderboards

Leaderboards are optional and visible only to opted-in users. A small participation fee ensures serious competition and reduces spam.

7. ML Insights

Basic machine learning will be used to identify productivity patterns and optimal study times, shown both individually and as anonymous global insights.

8. Platform

Web-first platform with future mobile expansion. Initial user base expected around 50 users.

9. Non-Goals

The platform will not host educational content, scrape third-party websites, or replace existing coding platforms.

10. Success Metrics

User retention, daily activity, efficiency tracking consistency, and leaderboard opt-in rates will define success.
